

WEEK – 1 REPORT

Global Supply Chain & Logistics Performance

Project Title: Global Supply Chain & Logistics Performance

Name: Naveen Kumar

Enrollment No: 24162171011

Branch: Computer Science & Engineering

Week 1 Activities

During the first week of the internship, I focused on understanding the fundamentals of the Global Supply Chain & Logistics Performance project. I studied the concepts of supply chain management, logistics operations, inventory management, and transportation systems.

I explored how organizations use data analytics to monitor shipment performance, inventory levels, warehouse operations, and transportation efficiency. I learned the importance of supply chain optimization in reducing operational costs and improving customer satisfaction.

I learned Python programming fundamentals and became familiar with Google Colab, dataset handling, and data analysis libraries such as Pandas, NumPy, and Matplotlib.

Tasks Completed

1. Understood the objectives and scope of the project.
2. Studied supply chain and logistics management basics.
3. Learned Python programming fundamentals.
4. Practiced variables, loops, conditions, and functions.
5. Explored Google Colab environment.
6. Learned CSV dataset analysis using Pandas.
7. Performed basic data cleaning tasks.
8. Studied logistics-related datasets.
9. Learned data visualization using Matplotlib.
10. Understood logistics analytics workflow.

Technologies and Tools Used

- Python
- Google Colab

- Pandas
- NumPy
- Matplotlib
- CSV Datasets
- Google Drive

Learning Outcomes

By the end of Week 1, I gained a strong understanding of supply chain and logistics concepts, Python programming basics, dataset handling, data cleaning techniques, and data visualization methods. I also developed practical experience using Google Colab for coding and data analysis.

Conclusion

Week 1 focused on building a strong foundation in Python programming, Google Colab, and logistics analytics. The knowledge gained during this week will help in upcoming stages such as data preprocessing, shipment analysis, inventory optimization, route performance evaluation, and logistics dashboard development.
